Focus

Cloud Security
Attack Surface/Exposure Management
Vulnerability Management
Security Automation (Python)

Skills and tools

Python [Django, Flask, pandas, Pyramid, scrapy]	*13 years*
Test-driven Development (TDD) [PyTest, Tox]	*13 years*
AWS [Lambda, S3, SQS, DynamoDB, StepFunctions, Athena, ElasticBeanstalk, EC2, ECS, CloudFormation, CloudWatch]	*7 years*
Databases [MySQL, PostgreSQL, MongoDB, Redis]	*~14 years*
Infrastructure [Linux, MacOS, Docker]	*~10-14 years*
Tools [Git, CI/CD, gitlab]	*~10-14 years*
AI [Claude]	*~2 years*

Experience

WebSafety Ninja 🇳🇱 *Reuver, Netherlands* *2018 – present (full-time since April 2021)*

Founder & CTO, Ethical security research company

Continuously discover internet-facing assets and scan ~4M websites for exposed misconfigurations and known vulnerabilities

Personally triage and validate findings before reporting, separating real risk from scanner noise; severity rated with CVSS

Responsibly disclosed **14,000+** vulnerabilities to system owners

Built the whole pipeline myself in Python, scalable at AWS: discovery, scanning, risk scoring, reporting and communication

Built a penetration testing team; scoped and managed 140+ penetration tests and reviewed their reports

Handled a suspected office-network compromise on site in Paris in 48 hours, from device examination and IOC search to the final report and regulatory notifications with the legal team

Mintlab *Amsterdam, Netherlands* *May 2019 — April 2021 (2 years)*

Senior Python Developer

As a part of small and independent team, developed from scratch innovative and flxeible integration platform Koppel.App, focused on (semi-) government case management

Koppel.App platform used top-edge technologies from AWS: Lambda, SQS and StepFunctions for data processing pipeline, CloudFormation to define infrastructure as a code

On Developed multiple connectors, used as input and output at the integration platform

Implemented several authorization options: JWT, token-based, 2FA

Developed an integration with Exact software for education-related organization

Developed the initial version of JSON-based language for entire koppeling description and data transformations, as intermediair step for no-code approach

Helloprint *Rotterdam, Netherlands* *April 2018 — April 2019 (1 year)*

Senior Python Developer

Build scalable API to wrap new structure for Printed products, as an integrated part of the new platform

Automated data import process, reducing total import time from 3 days to 2.5 hours using pandas and extended ORM solution

Developed API to provide a detailed overview of the critical part of the ordering process, combining data from different external sources, with lowest response time

Developed and maintained several scrapers to populate information from external sources using API aside reverse-engineering and scraping technics

Ginger Payments *Amsterdam, Netherlands* *November 2016 — May 2018 (1 year 6 months)*

Python Developer

Created automated API-level testing robot

Created custom database viewer as replacement of default AWS viewer, with focus on current business requirements

Developed and maintaining merchant's onboarding for platform and payment methods

Developed and maintaining integration with third-party providers

Developed and maintaining financial reports generating flow

Reported several minor security issues (see recommendations section)

Rebelmouse *Remote* *April 2016 — August 2016 (4 months)*

Python/Django Developer

Maintaining core app with XML/XSD stucture of internal modules

Refactoring and creating new internal modules with processing handlers

Creating documentaton for each created module (using Redmine and Confluence)

Setting up new application instances

Refactor existed modules to be covered with unit and integration tests

Refactoring and maintainance of different modules, responsible for interaction with various of 3rd party services: GitHub, MailChimp, Social Networks (Twitter, Facebook, Instagram)

Improving integraton between application layers (internal data API/model/processing/render layers)

Investiagating and fixing reported bugs

Ortnec LTD *Limassol, Cyprus* *December 2012 — March 2016 (3 year 4 month)*

Python Developer

Developed and supported 30+ sites network with different access levels
Upgraded NATS (content and analytics management system) integration
Upgraded and supported project with using CDN services
Created custom analytics reports
Built postbacks routing system and integrated with mailing utilities
Supported billing systems integrations
Integrated security and anti-fraud solutions into project

Zfort *Kharkiv, Ukraine* *May 2012 — December 2012 (8 months)*

Alessandro / Tweezerman

PHP Developer

cross-domain shopping cart solution

16brands

PHP Developer

implemented re-design
